Professional Summary

Aspiring DevOps and Cloud Engineer with hands-on experience in AWS infrastructure, Linux administration, networking, and CI/CD automation. Built and deployed cloud projects using EC2, S3, VPC, IAM, Auto Scaling, CloudFront, Route 53, ACM, and GitHub Actions. Experienced in configuring secure public/private network architectures, automating deployments, monitoring infrastructure, and troubleshooting Linux and cloud environments. Seeking a DevOps, AWS Cloud, or Linux Administration internship or entry-level opportunity.

Technical Skills

Cloud Platforms:	Amazon Web Services (AWS), EC2, S3, IAM, VPC, Route 53, CloudWatch, Auto Scaling, Elastic Load Balancing, CloudFront, ACM, NAT Gateway
Linux Administration:	User and group management, file permissions, package management, system services, Apache HTTP Server, SSH, networking, log analysis, troubleshooting
CI/CD and Version Control:	Git, GitHub, GitHub Actions, CI/CD pipelines, automated build and deployment workflows
Networking and Security:	TCP/IP, subnetting, public/private subnets, DNS, Security Groups, Load Balancing, NAT Gateway, HTTPS/TLS
Tools and Technologies:	AWS CLI, VMware, WinSCP, PuTTY, Apache, IIS, Bash/Shell Scripting
Currently Learning:	Docker, Jenkins, Terraform, Kubernetes

Experience

AWS and Linux Trainee	June 2026 – Present
<i>So. Infotech Private Limited</i>	<i>Noida, India</i>

- Designed and configured AWS infrastructure using EC2, VPC, public and private subnets, NAT Gateway, Elastic Load Balancer, IAM roles, and Security Groups.
- Administered Linux systems by managing users, groups, file permissions, packages, services, Apache web servers, SSH access, and network configurations.
- Deployed static and web-based applications using Amazon S3, EC2, CloudFront, Route 53, and ACM with custom domains and HTTPS.
- Configured CloudWatch monitoring and EC2 Auto Scaling policies to support application availability and demand-based scaling.
- Implemented automated deployment workflows using Git, GitHub, GitHub Actions, AWS CLI, and Amazon S3.

Projects

Secure AWS Three-Tier Architecture

- Designed a secure AWS network architecture with public and private subnets, EC2 instances, NAT Gateway, Elastic Load Balancer, IAM roles, route tables, and Security Groups.
- Restricted direct public access to private instances while providing controlled outbound internet access through a NAT Gateway.

Automated CI/CD Pipeline for Amazon S3

- Built a GitHub Actions workflow to automatically build and deploy a web application to Amazon S3 whenever code was pushed to the repository.
- Configured GitHub repository secrets and AWS credentials to enable secure deployment automation.

EC2 Auto Scaling and Load Balancing

- Configured an EC2 Auto Scaling group, launch template, Elastic Load Balancer, target group, and CloudWatch alarms for demand-based scaling.
- Performed load testing and verified automatic instance scaling and traffic distribution across healthy EC2 instances.

Secure 3D Portfolio Website Deployment

- Deployed a production-ready 3D portfolio website using Amazon S3, CloudFront, Route 53, and AWS Certificate Manager.
- Configured a custom domain, HTTPS certificate, DNS records, CDN distribution, and automated deployment through GitHub Actions.

Education

Bachelor of Technology in Computer Science Engineering

September 2023 – August 2027

Noida International University

Greater Noida, Uttar Pradesh

CGPA: 7.50/10
